

Phase 2: Identify what is possible now

Step 5

Create fleet electrification timeline

Things to do

- Research EVs that are available and that are in production or development, identify near-term deployment opportunities, and categorize long-term aspirational prospects.
 - This will affect what areas of the fleet to prioritize early in the process if the required vehicles are not available right away.
- Determine your electrification milestones. They should be achievable but should push you at the same time.
- Decide whether you want to install vehicle telematics or smart chargers to track the energy used as fuel in budgeting and billing.
