

Phase 1: Review the landscape and gather the team

Step 1

Learn from existing electrification roadmaps, industry publications and successful case studies

Things to do

- Gather general information and deepen your understanding of core issues with fleet electrification.
- Read the articles, papers and one-pagers in our resource directory to learn from industry experts (like NACFE and RMI, which developed the Run for Less demonstration) and from companies already making the switch to electric (such as Volvo).
